

HOW TO USE

Art no 1892503-8060

THIS PRODUCT IS MADE OF CORTEN STEEL

The product come freshly manufactured in their original dark gray steel color. The steel will rust and get a beautiful reddish brown patina. Already after a week, the rusty color begins to appear and over time it gets darker and darker. It needs a varied climate where it is exposed to moisture and then can dry completely.

As the corten steel builds up the rusty surface, it can discolour sensitive and porous substrates such as concrete. You should be careful where you place the product for the first time. When the surface has become sufficiently dense and strong, it will not discolor any more.
